

Fricke Ducting Upgrades

Location: Missoula, MT

Type: heating duct upgrades

Size: single family home

Date: Completed in 2011

Description

The owners were experiencing insufficient airflow and poor air quality throughout their home. In addition they were concerned about inconsistent room temperatures and comfort issues throughout the residence.

Customer Goals

The customers came to us looking for a cost effective plan for improving the underperforming heating and ventilation systems as well as improving the insulation and the overall comfort and air quality in the home.

How Energetechs Helped

Energetechs designed and installed modifications to the HVAC system, installed a heat recovery ventilator (HRV), and provided air sealing and cellulose insulation to various areas in the home. A detail oriented project management strategy kept the goals of improved comfort and energy efficiency at the forefront throughout the project.

Highlights

Exceptional indoor air quality: The owners are extremely satisfied with the high standard of indoor air quality.

Improved comfort: the owners report that the home is now very comfortable with even temperatures throughout.

Cost-effective: The owners are very happy with both the cost of the improvements and their new, lower utility bills.
